Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 22, 2003 has been entered.
2. Claims 10, 14, and 17 have been canceled.
3. New claims 18, 19, and 20 have been added.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 11-13, 15-16, and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Rudolf'909. Rudolf'909 discloses the invention as claimed including a working tool "18", a hollow spindle "16", a housing "12", a locking spindle "26", a resilient member "30", a pivot axis "28", a locking flange "58", a locking lever "32", a slider via a camming surface of the lever with a predetermined radius (see Figs. 2 and 3), and an contact surface via the annular extent "34". The camming surface of the lever "32" is being an annular support member and pivots on the same axis of the lever. Therefore, it has an axis that is parallel to the pivot axis. It should also

Art Unit: 3721

be noticed that since the camming surface has an increasing radius, limitations of claims 15-16 are considered to be met by the reference.

With regards to claims 11 and 12, insofar as the claims are understood, the camming surface, i.e., the slider, of the lever "32" is in contact with the extent, when pivoted between 30° to 120°, especially at 80° and therefore, forms the angle (α).

Regarding claim 13, insofar as the claims are understood, the lever "32" travels at least approximately 5° to 30°, in particular 10°, to arrive the exchange position.

Insofar, as claims 15-16 are understood, it is believed that the annular member "34" includes an axis (any axis) that is parallel to the pivot axis of lever "32" and of the claimed distance set forth.
